SUMMARY

Backend engineer with 3+ years owning fintech data infrastructure at JP Morgan Chase, spanning zero-downtime database migrations across 2TB+ and 5 teams, ETL pipelines moving 500K+ records/day, and LLM agents running in production. Depth in distributed systems, AWS-native pipelines, and agentic systems that remove manual intervention at scale.

PROFESSIONAL EXPERIENCE

JP Morgan Chase & Co.

Bengaluru, India

Software Engineer II

Jan 2026 – Present

- Built a self-service feed onboarding platform that automates the path from Jira spec to Java entity generation, table creation and ticket closure, auto-returning incomplete requests with the exact missing fields. Cut feed onboarding from 3 days to under 6 hours across 200+ feeds.
- Extended it with a contract-based monitoring layer covering 20 feeds for 4 major trading consumers: it scans registered datasets, parses failure logs, surfaces root cause with a recommended action, and escalates SLA-breach risk to consumers, cutting on-call triage from 2 hours to 15 minutes.
- Shipped agentic tooling into production: an MCP server where LLM agents vet datasets against configurable data-quality templates, adopted by the Data Quality team to replace manual review, and a self-improving agent (3 skills, Moderne CLI) that drove a Spring Boot 2.x to 4.x migration, remediating 120+ vulnerabilities across 22 repositories.
- Carry a weekly on-call rotation for the platform; onboarded and mentored 2 engineers, an intern and an experienced joiner, on the team's codebase, delivery process and AWS infrastructure.

Software Engineer

Jul 2023 – Dec 2025

- Architected a MySQL to PostgreSQL migration (50+ tables, 2TB+, 5 teams) using dual-write and shadow-read for a zero-downtime cutover, saving \$120K annually with 40% faster queries; adopted as an org-wide playbook.
- Built a Python and Java ETL framework handling 500K+ records/day (8GB, peak 200 rec/sec) across 15+ vendors on AWS Step Functions (Lambda, Glue, S3) at a 99.9% uptime SLA, cutting onboarding from 7 days to 1 (85%); adopted by 3 teams.
- Designed an event-driven architecture on Spring Boot and Kafka (8 topics, 3 consumer groups, 50K+ events/day), cutting API response time 35%.
- Architected multi-account AWS infrastructure in Terraform with Spinnaker blue-green CI/CD, standardised across 4 teams; resolved 15+ production incidents and wrote runbooks that cut recurrence 50%.

Software Engineering Program (SEP) Intern

Jan 2023 – Jul 2023

- Led a Java 8 to Java 17 migration across 12 microservices, cutting boilerplate 30% and startup time 25% and removing 3 deprecated security libraries flagged in compliance.
- Built Python automation to reconcile vendor file backlogs, cutting manual reconciliation time 80%.

TECHNICAL SKILLS

Core Technologies: Java 17, Python 3.x, SQL, Spring Boot, Spring Framework (Core, MVC, Data JPA, Security)

Backend & AI: RESTful APIs, Microservices, GraphQL, Kafka, Docker, MCP (Model Context Protocol), LLM agents

Cloud & Infrastructure: AWS (ECS, S3, Lambda, Step Functions, Glue, RDS, EC2, SQS), Terraform, Spinnaker, IaC

Observability & Testing: Datadog, Splunk, JUnit, Mockito, pytest

Databases: PostgreSQL, MySQL, JPA/Hibernate

PERSONAL PROJECT

KiteTerminal, Algorithmic Trading Terminal | github.com/vikalp10

Python, FastAPI, Next.js, TypeScript, Tauri

- Built a full-stack trading terminal on Zerodha Kite Connect REST and WebSocket APIs with separate intraday, swing and F&O sections, and a paper-trading switch that routes simulated and live orders through one auditable path.
- Runs 7 strategies across equity and index options: swing entries screen a 500-stock universe behind pattern, fundamental and relative-strength gates, while F&O trades multi-leg structures with delta-based strike selection, all validated on a no-look-ahead backtester modelling real brokerage costs and slippage.

EDUCATION

Thapar Institute of Engineering and Technology, Patiala, India

Jul 2019 – Jun 2023

B.E. in Computer Science & Engineering | CGPA: 8.3/10.0 | Merit Scholarship (top 10%)

ACHIEVEMENTS & CERTIFICATIONS

- AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services (2023) | Best Performing Intern, top 5% of cohort
